

CHILDREN'S VACCINE FOR 6 MONTHS TO UNDER 5 YEARS OLD

WHO IS ELIGIBLE?

All children aged 6 months and over are now eligible to receive a Moderna Spikevax COVID-19 vaccine. Children must be at least 6 months of age at the time of vaccination.

Recommendations

A primary series of 2 doses of the Moderna vaccine be given, at least [8 weeks apart](#).

For children who are moderately to severely immunocompromised, a primary series of 3 doses of the Moderna vaccine be given, with an interval of 4 to 8 weeks between each dose.

For children who had a recent COVID-19 infection:

- Wait 8 weeks after the start of COVID-19 symptoms or a positive COVID-19 test before beginning or continuing the primary series.
- This interval may be shortened to 4 weeks for children who are moderately to severely immunocompromised.

For children with a previous history of Multisystem Inflammatory Syndrome in Children (MIS-C), regardless of immunocompromised status, they may receive the vaccine when clinical recovery has been achieved or ≥ 90 days since the onset of MIS-C, whichever is longer.
