Youth: What can I do to protect my family from COVID-19?

Narrator: Unless all the members of the household are vaccinated the threat of COVID-19 is still present. Multi-generational households are more vulnerable and children need to be vaccinated.

Youth: I had COVID-19 and didn't really feel anything. Does this mean I can get it again?

Narrator: Although prior infection can provide some protection, a vaccine is necessary to protect against new variants. With this in mind, the city has set up a 12 plus program. Close to 3 million doses of the mRNA vaccine have been given to youth in the U.S. and no serious side effects have been identified. Please Bring your child's health card to the appointment. If your child does not have a health card please book via telephone or refer to the COVID-19 hotline for more help by texting vaccine to 1-833-750-0888.

Youth: I have to let my friends know how to help and protect their families. This year has been tough and it can only return to normal if I do my part.
